

# HARMONIA

Valvole termostatizzabili dinamiche  
Dynamic thermostatic valves

Designed in **ITALY**. Made in **ITALY**.

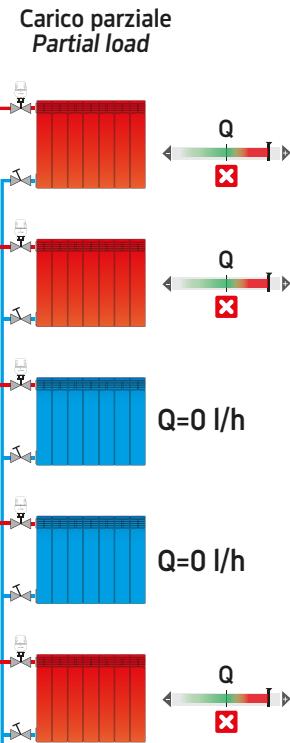

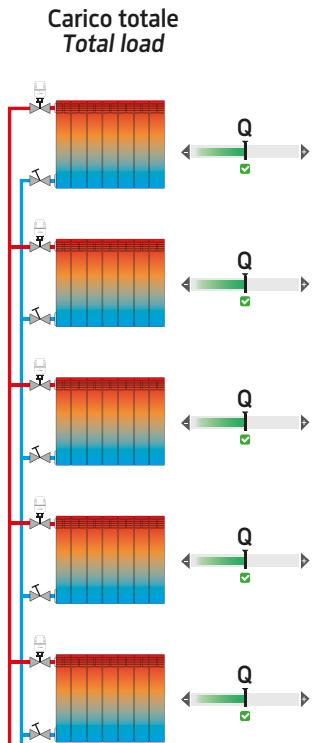

Le valvole termostatiches dinamiche Harmonia garantiscono il bilanciamento del sistema idraulico anche in condizioni di carico parziale, garantendo il massimo comfort.

Harmonia è disponibile nelle versioni diritte, a squadra, corpo reverso o coassiali, tutte con diametri di collegamento DN 10 e DN 15 per tubo ferro o Eurokonus.

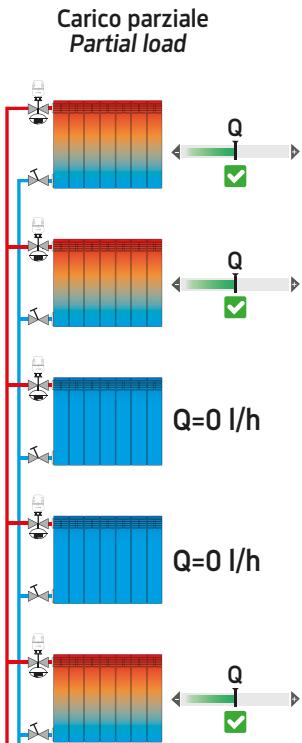

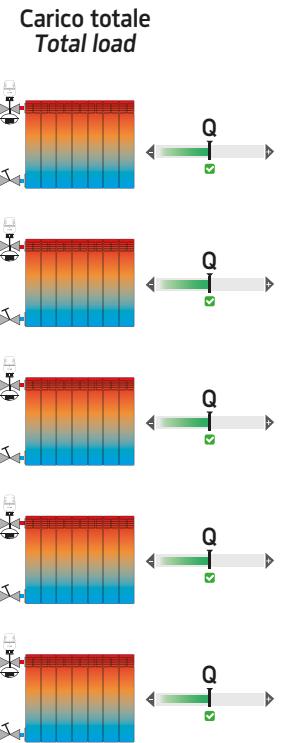

*Dynamic thermostatic valves Harmonia guarantee the balancing of the hydraulic system also in partial load conditions, ensuring maximum comfort.*

*Harmonia is available in straight, square, with reverse body or coaxial versions, all with DN 10 and DN 15 connection diameters, for iron pipes or with EUROK connection.*

## Bilanciamento statico Static balancing

## Bilanciamento dinamico Dynamic balancing

Con valvole dinamiche è garantita sempre la portata corretta su tutti i radiatori anche in condizioni di carico parziale.  
*Dynamic valves guarantee the correct flow rate for all radiators even in partial load conditions.*

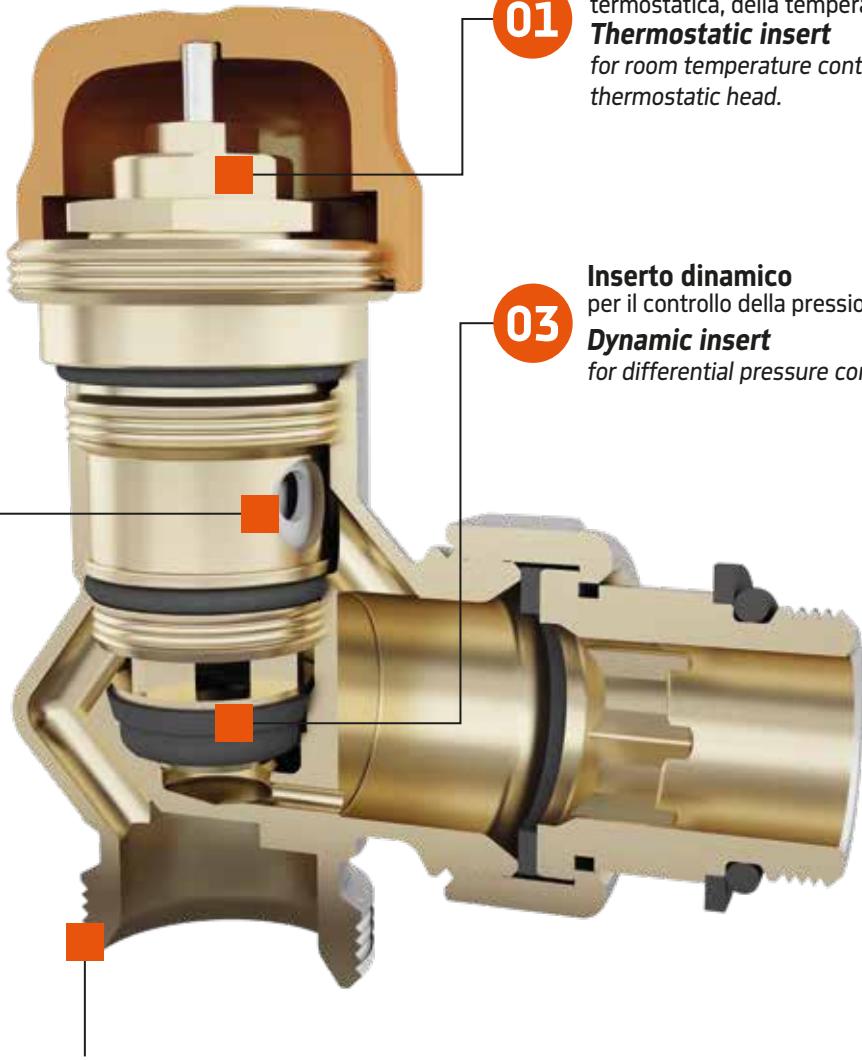

**3 componenti in una solo valvola:**

**3 components in one valve:**

**6 diverse posizioni** per la preregolazione della portata.

**6 different positions** for presetting the flow rate.

**02**

#### Vitone termostatico

per il controllo, mediante testa termostatica, della temperatura ambiente.

#### Thermostatic insert

for room temperature control with a thermostatic head.

#### Inserto dinamico

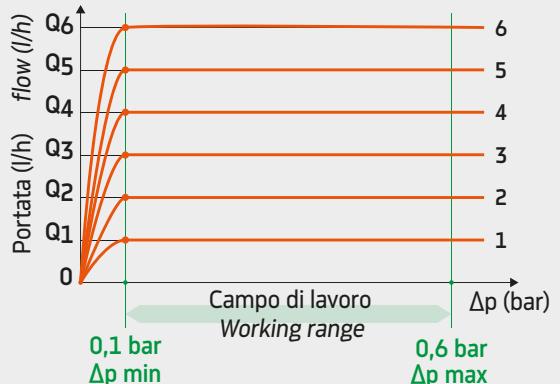

per il controllo della pressione differenziale.

#### Dynamic insert

for differential pressure control.

Tutte le figure sono disponibili con collegamento DN 10 e DN 15 per tubo ferro o Eurokonus.  
All the figures are available with DN 10 and DN 15 connection diameters, for iron pipes or with EUROK connection.

Affinchè il dispositivo sia in grado di mantenere costante la portata il  $\Delta p$  deve essere compreso tra 0 e 0,6 bar.  
In order to keep the flow rate constant, the  $\Delta p$  has to be between 0 and 0.6 bar.
