

Duck Strip Radiant Panels

Sabiana is the leading European manufacturer in the design, production and sale of **radiant panels** operating on hot water, high temperature hot water and steam.

Since 1971, **over 30.000 installations** have been made in all types of environments (small, medium and large industry, shopping centres, aircraft hangars, sporting and recreation facilities, zootechnical facilities), demonstrating the soundness of the product and in new and highly innovative applications, such as the increasingly widespread air-conditioning of production areas that guarantees maximum comfort and consistent productivity all year round, even in the hotter summer months.

H eating

by radiation means absolute silence, no forced movement of the air, uniform temperatures throughout the environment, and no risk of fire. It means energy savings, as people, the walls

and the floor are heated directly, while the air is only heated indirectly, with consequent minimum stratification of the heat. It means constant operation over time and no routine maintenance on the product, with the peace of mind that, year after year, at the start of each season, this product will continue to provide incomparable comfort.

8

different models are available in 2 standard colours and other colours upon request. The heating emission values have been certified by the leading European certification laboratory, the University of Stuttgart in Germany. The values have been obtained by applying the harmonised European standard EN 14037.

Duck Strip Radiant Panels

Technical specifications:

- Quality steel radiant panel, 0.8 mm thick, cold formed by mechanical forming procedure. The 300, 600, 900 and 1200 mm wide panels in 6 and 4 m lengths (3 and 5 m upon request), have semicircular self-locking sockets, spaced 100 or 150 mm apart depending on the models that are used to hold the pipes that carry the hot water.

- Steel pipes pressed into the semicircular sockets on the panel.

Standard Version: panels fitted with 1.5mm thick pipes, outside diameter 1/2", made by electric welding from high-quality cold rolled steel strips. The pipes are electronically tested by the manufacturer. The standard version panels are suitable for operating pressures up to 4 bars and maximum hot water temperature up to 120°C. Upon request, panels can be supplied for operation between 4 and 10 bars.

Special Version: panels fitted with 2.35mm thick seamless pipes (or with equivalent features), outside diameter 1/2", suitable for use in systems with operating pressures up to 16 bars and high temperature hot water temperatures from 120°C to 180°C.

The pipes have belled ends at one side to ease the longitudinal connection of the strips with welding. Alternatively, the pipes can be supplied without belled ends for connections using pressfittings.

- Angle brackets for hanging the panel.
 - First header and end header,
made by connecting the various pipes in parallel into welded headers,
factory welded and tested to the required operating pressure.
 - Sized fibreglass insulation (thickness 30-40-50 mm) protected
at the top by aluminium sheet (*). Other thickness or configurations upon request.
 - Side edging strips made from pre-painted plate sections,
to retain the edges of the insulation (*).
 - Pre-painted retaining clips (one each metre) to hold the insulation (*).
 - Shaped and painted make-up joints,
with fastening bars, to cover the joint areas (*).
 - Protection with special phosphate de-greasing procedure
and epoxy polyester coat, dried in a furnace at 180°C.
Colour RAL 9002 (light grey) or RAL 9016 (white). Other RAL colours upon request.
The treatment is not suitable
for the outdoor installation of the radiant panels.
 - Reaction to fire class: A1.
 - Emission of the radiant surface $\epsilon = 0,96$.
 - The painting complies to the European Standard 76/769/EEC.
- (*) with separate packaging.

Characteristics of the insulation

Description

Mineral wool insulation treated with heat setting resins,
coated on the outside face with 25 micron aluminium foil.

Reaction to fire

Class A1 according to EN 13501-1 standards.

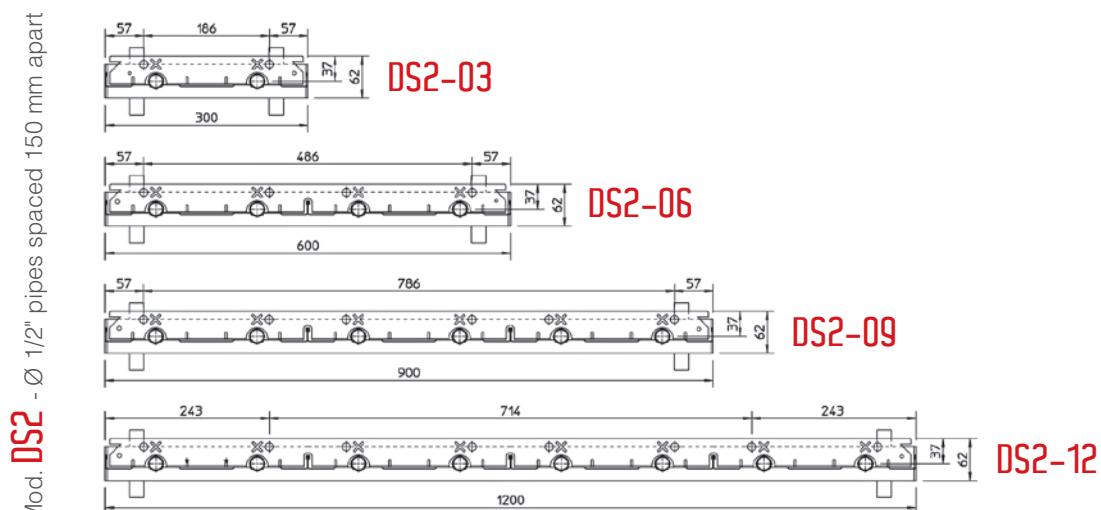

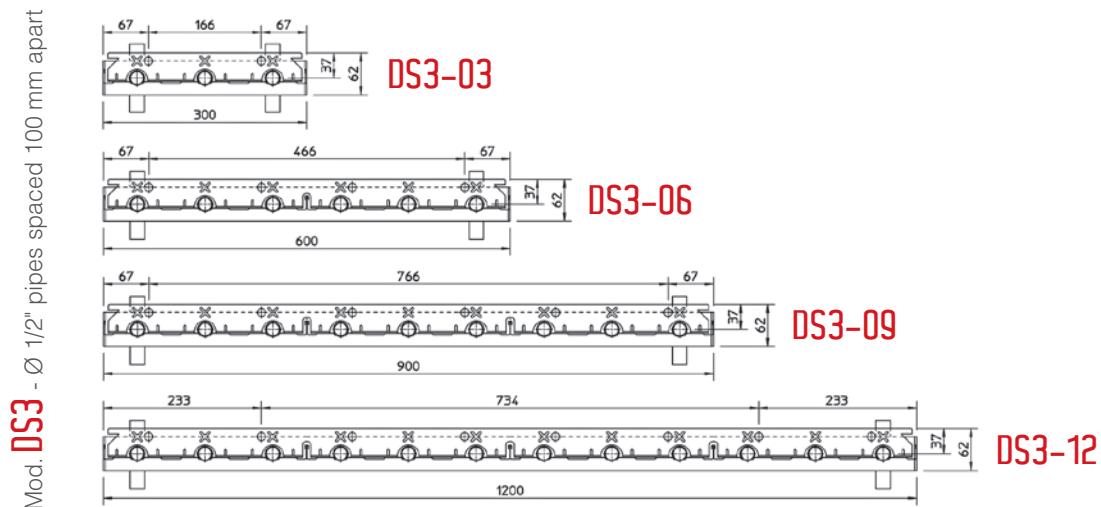

Thickness	30 mm	50 mm
Thermal conductivity according to UNI CTI 7745 and UNI FA 112 standard	0,037 W/mK	0,037 W/mK
Density	14 kg/m ³	14 kg/m ³
Resistance	0,81 m ² K/W	1,35 m ² K/W

Technical specifications

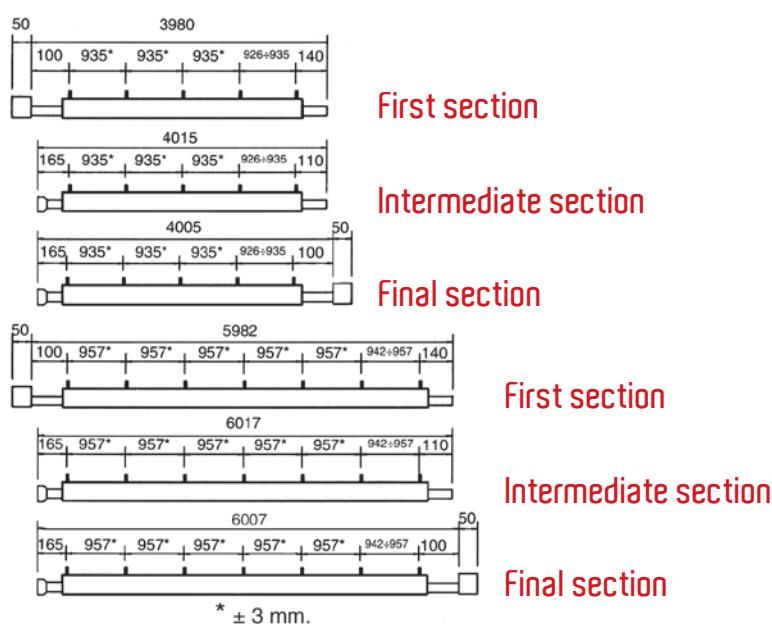

The totally inorganic nature of the mineral wool ensures
the following characteristics: maintenance of the performance over time,
resistance to parasites and rodents, not hygroscopic, rot-proof.

D and D+D headers:

Distance between the connections mod. 03 = 200 mm mod. 06 = 500 mm
mod. 09 = 800 mm mod. 12 = 1100 mm

D and D+D headers are not suitable for high temperature hot water or steam.

Header "D" should be used with hot water supply

for strips up to 50 m (with slow and gradual opening of the water valve).

For strips longer than 50 m a special "D" header

is recommended, please contact Sabiana Technical Department.
